

Special Lecture Series Held As IIT Indore Turns Ten

On the completion of 10 years of the Indian Institute of Technology (IIT) Indore, the Centre of Industry Relations (CIR) organised a special lecture series. The lecture series aimed

at bringing together experts from both industry and academia to discuss and address important concerns and galvanise their efforts towards forging successful partnerships that would prove mutually beneficial. A seminar on 'the large-scale structure of our universe with

radio galaxies' was organised on March 25. The speaker was President's International Fellowship Initiative (PIFI) post-doctoral fellow at China's National Astronomical Observatories CAS, Dr Prabhakar Tiwari. The focus of his seminar was testing of the cosmological principle (which assumes homogeneity and isotropy at large distances scales) at the largest possible scales across a large redshift range.
