INDORE

The Centre for Rural Development and Technology (CRDT) at the Indian Institute of Technology-Indore (IIT-Indore) conducted a two-day skill development training programme on November 19 and 20 at the Nayagaon gaushala under Simrol Gram Panchayat here.

The programme was organized under the DST-SEED project titled "Livelihood Interventions for Scheduled Caste Workers through 'Shramik Vikas' Community-Based Training Programmes in Simrol Block of Indore District, Madhya Pradesh."

The training primarily focused on techniques in organic farming, construction materials and related skill development post-harvest solutions using PDI systems.

As many as 190 participants from the Simrol block actively took part in practical sessions, demonstration workshops and expert interactions. The programme aimed to strengthen participants' technical understanding, employa-

bility and sustainable livelihood skills.

Faculty members and technical experts from IIT-Indore briefed the participants on modern organic farming practices, efficient use of locally available construction materials and advanced post-harvest management technologies. The initiative reflected CRDT's commitment to rural empowerment, technological outreach and inclusive development.

Local panchayat representatives and community

leaders appreciated IIT-Indore and the DST-SEED programme for their efforts in bringing skill-oriented training initiatives to rural regions. The programme concluded with an interactive session and the distribution of study material to the participants.

This training marks another significant step under the "Shramik Vikas" mission towards providing skill development opportunities and technology-driven rural solutions to underprivileged communities.
